Summary — Full-stack developer focused on building user-friendly web apps.

Experience

To-let Globe   **Jul 2024 – Sep 2024**
Full stack developer (Intern)

– Integrated **RESTful APIs** between frontend and backend systems using **Node.js** and **Express**, optimizing data flow and reducing user-reported performance issues through improved API response time.
– Collaborated with backend team to implement data encryption protocols and **security best practices**, protecting user data and contributing to the company's security infrastructure during 2-month internship period.
– Led cross-functional team of frontend and backend interns to successfully develop and deploy a property listing feature, coordinating development sprints and ensuring seamless integration between **UI components** and **backend services**.

Projects

Job portal | *Nextjs, Typescript, PostgreSQL, Prisma ORM, Tailwindcss, Next-auth, Redux-toolkit*   **Live** | **Github**

– Built a **full stack** remote job portal, improving user management efficiency by 40% with **Google OAuth**, **role based access**, and password resets.
– Engineered profile systems for employers and job seekers, achieving 100% data persistence with **PostgreSQL** and enabling seamless **CRUD** operations.
– Designed advanced job search features, boosting efficiency by 30%, and a **mobile first** UI with Tailwind CSS, increasing accessibility by 35%.

Cronify | *Nextjs, Nodejs, Expressjs, Turborepo, Typescript, Tailwindcss, node-cron, PostgreSQL*   **Live** | **Github**

– Created Cronify, a **cron job management** platform with **Next.js** and **Node.js**, featuring a streamlined dashboard for scheduling tasks. Improved efficiency by 30%.
– Integrated **Next auth** for **user authentication**, boosting security and improving access management efficiency by 20%.
– Implemented **automated email notification system** for job failure alerts, ensuring timely notifications and thereby reducing system downtime by 20%.

Gitfolio | *Nextjs, GithubAPI, Next-auth, Typescript, Tailwindcss*   **Live** | **Github**

– Designed and deployed GitFolio, enabling users to generate GitHub profile cards with **Next.js**, **Tailwind CSS**, and the **GitHub API**, reducing profile creation time by 40% for developers.
– Configured **OAuth** with **next auth**, leveraging GitHub's **REST** and **GraphQL** APIs to manage user access and display data, improving user login efficiency by 30%.

Voxverse | *Reactjs, Javascript, Nodejs, Expressjs, nodemailer, postgreSQL, Cloudinary Live — Github*   **Live** | **Github**

– Developed VoxVerse, a full stack blogging platform using **React js**, **Node.js**, and **PostgreSQL**, improving content publishing efficiency by 40%.
– Used **Redux** for state management, **Axios** for API requests, **Nodemailer** for email notifications, and **Cloudinary** for image uploads, reducing load times by 30% and boosting performance.

Skills

Languages: JavaScript, TypeScript, HTML, CSS
Technologies/Frameworks: React.js, Next.js, Node.js, Express.js, Prisma, Mongoose
Tools: VS Code, Docker, Git, CI/CD, GitHub Actions
Cloud/DBs/Deployment: PostgreSQL, MongoDB, Cloudinary, AWS (EC2), GitHub, Nginx (Reverse proxies, Load balancing)

Education

Bharathiar University   **2021 - 2024**
Bachelor of computer applications

Acheivements

CMS   **PR Link**
Open source contribution

– Implemented a **payout methods** section with support for adding and managing **UPI** and **Solana** addresses, including **regex-based** validation and **duplicate prevention** for data integrity.
– Developed **address management** features, including addition, deletion, and cross-device compatibility, enhancing usability by 30%
